ADVISORY ACTION ATTACHEMT

In response to applicant's arguments that neither Valentine nor Steer discloses a modem, which modulates signals to be transmitted from cellular phone and demodulates signals received, the examiner respectfully disagrees. Both Valentine and Steer disclose the concepts of cellular telephone and RF signal transmission. Theoretically and practically, an electromagnetic signal is transmitted from a source to a destination by being modulated with a carrier signal with having a carrier frequency. Since the systems of Valentine/Steer disclose RF communications in a wireless/cellular system where signals are transmitted by using radio frequencies, hence, it is inherent that the systems of both Valentine and Steer provide modern that modulates signals to be transmitted and demodulates the received signals. (For further concepts of radio signal transmission please see the book by J.G. Proakis and M. Salehi, Communication Systems Engineering). Furthermore the language of the claims are too broad, and any device capable of transceiving RF signals can read on the element, "modem, which modulates signals to be transmitted from cellular phone and demodulates signals received". Examiner suggests additional and specific forms of data transformation to be added to make the claim favorable for an allowance.

In response to applicant's arguments that Steer does not disclose or suggest a circular first area having a predetermine site at its center, the examiner respectfully disagrees. Steer discloses protected zones (e.g., suppressing signals are radiated to protect a certain inherently predetermined area), where the protected zone is inherently determined by an antenna (e.g., antenna broadcasting suppressing signals), where antenna signals are inherently radiated in a

Application/Control Number: 10/010,687

Art Unit: 2617

circular form, and thus providing a circular first area having a predetermined site at its center

(Steer, col. 6, lines 15-65).

In response to applicant's argument that there is no suggestion to combine the references,

the examiner recognizes that obviousness can only be established by combining or modifying the

teachings of the prior art to produce the claimed invention where there is some teaching,

suggestion, or motivation to do so found either in the references themselves or in the knowledge

generally available to one of ordinary skill in the art. See In re Fine, 837 F.2d 1071, 5

USPQ2d 1596 (Fed. Cir. 1988) and In re Jones, 958 F.2d 347, 21 USPQ2d 1941 (Fed. Cir.

1992).
